Redesigning the FLUXNET Web Site to Enhance the User Experience

This poster discusses the current changes taking place within the FLUXNET website and the redesigning of data organization to maximize data seeking and the user experience. The new web site, created using a Drupal content management system and PostgreSQL database, includes the citations of hundreds of publications who use data from Fluxnet affiliated eddy covariance monitoring sites around the globe. The poster will address the services Fluxnet provides, the process of organizing the bibliographic material and specific features that provide enhanced usability for both the data center and the data seeker.
